RESEARCH STATEMENT

Storage and data movement are becoming increasingly complex in modern supercomputing environments due to heterogeneous hardware, diverse programming environments, and rapidly evolving scientific workloads. Modern workflows combine large-scale simulations, data analytics, and AI pipelines, all of which move massive volumes of data across layered software stacks and heterogeneous storage infrastructures. Understanding and optimizing data movement in such environments is critical for enabling scalable and reliable scientific discovery.

Challenge 1: How do we understand workflow data movement and performance across heterogeneous tasks, programming environments, software stacks, compute devices, and storage systems?
Challenge 2: How do we connect performance signals across these heterogeneous components to track the lineage and lifecycle of scientific data?
Challenge 3: How can we use this information to enable targeted optimizations instead of today's trial-and-error tuning approaches?

My research aims to address these challenges by developing systems that combine performance monitoring, data lineage analysis, and intelligent optimization for scientific workflows. First, we develop **eBPF-based telemetry mechanisms** that capture fine-grained performance signals enriched with workload context, enabling scalable monitoring and explainability of I/O and storage behavior across heterogeneous HPC systems. Then, we establish **causal relationships between workflow characteristics and system performance**, enabling tracking of data lineage and lifecycle across complex software and hardware layers. Finally, we build **runtime optimization pipelines** that analyze workflow telemetry to identify bottlenecks and apply targeted optimizations during execution.

By enabling explainable monitoring, data lineage tracking, and targeted optimization, this research aims to transform how scientists interact with data-intensive workflows on future supercomputing systems. The ability to understand and optimize data movement across heterogeneous infrastructures will improve workflow efficiency, enhance reproducibility, and accelerate data-driven scientific discovery across simulation, AI, and analysis workloads.

SUMMARY

- Computer scientist specializing in data movement, storage systems, and performance analysis for large-scale scientific and AI workflows in high-performance computing (HPC).
- Research focuses on explainable I/O, workflow-aware data systems, and end-to-end performance optimization, enabling scientists to understand and optimize data movement across heterogeneous compute, storage, and software stacks.
- Develops workload-aware monitoring, data lineage tracking, and intelligent runtime optimization systems to improve scalability, reproducibility, and efficiency of data-intensive scientific workflows.
- Creator and lead developer of open-source research infrastructure including DLIO Benchmark and DFTracer, widely used for benchmarking and analyzing deep learning I/O performance in HPC environments.
- Published extensively in top HPC venues (SC, IPDPS, HPDC, CCGrid, Cluster) with multiple best paper awards, and actively contributes to the community through peer review, conference service, and collaborative research initiatives.

RESEARCH AREAS

- **Explainable I/O.** Explaining *why* I/O is slow by connecting low-level storage telemetry with workflow context and the anatomy of the storage stack: DataCrumbs (eBPF-based multi-layer I/O telemetry), Metis (agentic knowledge synthesis for explainable I/O, REX-IO'26), and the XIO vision (SSDBM'25).
- **Performance Monitoring and Analysis.** Scalable tracing and automated analysis of workflow data movement: DFTracer (SC'24), DFAnalyzer, WisIO (ICS'25), HORATIO (SSDBM'26), IOMax (SC-W'23), Recorder, and SmartIO (PDSW'25).
- **Provenance for Scientific Workflows (new).** Moirai (LDRD, PI), a provenance tool that tracks the lineage and lifecycle of data across workflow tasks, software layers, and storage systems.
- **Deep Learning I/O Characterization and Optimization.** From monitoring to characterization to optimization of AI training pipelines: DLIO (CCGrid'21, Best Paper; MLPerf Storage), GLANCED-IO (HPDC'26), CoDL (REX-IO'26), Stimulus (CCGrid'22), DYAD (SBAC-PAD'24), and checkpointing for large language models.
- **Workload-aware Middleware and Storage Libraries.** Hermes (HPDC'18), UnifyFS (IPDPS'26; R&D 100), DYAD (SBAC-PAD'24), WADO (SSDBM'26), HCL (Cluster'20), LABIOS (HPDC'19, Best Paper), and intent-driven I/O (Mimir, H5Intent, IFlux).

EDUCATION

Illinois Institute of Technology — Chicago, IL, USA
Ph.D. in Computer Science. CGPA: 3.66/4 — 2016–2021

National Institute of Technology — Jamshedpur, India
B.Tech (Hons) in Computer Science and Engineering. CGPA: 8.61/10 — 2009–2013

PROPOSALS AWARDED

- **Principal Investigator**, "Trusted Data Provenance for HPC Workflows (Moirai)," LDRD Exploratory Research 27-ERD-025 (3 years).
- **Co-Principal Investigator**, "DLDL: Deep Learning Data Loading."
- **Thrust Lead for Data Management**, "Heuretes: cross-site data movement under time constraints," LDRD Strategic Initiative.
- **Thrust Lead for Data Management**, "FRACTALE: multi-cluster scheduling and data management," LDRD Strategic Initiative (from Oct 2023).

- Karsten Schwan Best Paper Award at the 28th International ACM Symposium on High-Performance Parallel and Distributed Computing – HPDC (June'19)
- Citation Rate:
  - All citations: 432 with h-index: 12

PEER REVIEW

- **Journals:** 20 reviews for IEEE TPDS, IEEE TKDE, ACM Computing Surveys, and JCST over 5 years (2020–2024).
- **Conferences:** 150 reviews for SC, IPDPS, HPDC, IEEE Cluster, CCGrid, ICS, and ICPP over 6 years (2021–2026).
- **Workshops:** 47 reviews for REX-IO, ESSA, ReWords, Practically FAIR, PERMAVOST, and LLMxHPC over 6 years (2021–2026).

Review Board:

- Review Board Member for Transactions on Parallel and Distributed Systems.
- Co-editor of "Advancements in Extreme-Scale I/O, Storage Systems, and Data Analytics" Issue in Frontiers Journal.

INVITED TALKS AND PANELS

- 2021 Dagstuhl Seminar on Data Management
- Data management workshop in Advanced Scientific Computing Research (ASCR) 2021.
- “Challenges in Characterizing I/O in Large Scientific Workflows” in the 2nd Workshop on Re-envisioning Extreme-Scale I/O for Emerging Hybrid HPC Workloads (REX-IO) 2022
- “DLIO Benchmark: Data-driven benchmark for deep learning workload in HPC” in storage seminar at Lawrence Berkley National Laboratory 2022.
- “DLIO Benchmark: Data-driven benchmark for deep learning workload in HPC” in storage seminar at Centre for High Performance Computing, South Africa National Meeting 2023
- Talk on Intent driven HDF5 optimization at The HDF User Group Meeting 2023
- Invited talk at ALCF Seminar at Argonne National Laboratory 2024
- “DLIO Benchmark and Profiler” in storage seminar at NCSA 2024
- Talk for AI4S seminar at 2024 Scientific Machine Learning Research Group, Rutherford Appleton Laboratory, Science and Technology Facilities Council (STFC), UK
- “Optimizing Molecular Dynamics AI model using HDF5 and DYAD” at The HDF User Group Meeting (HUG) 2024
- Talk on “Analyzing I/O in Deep Learning Workloads” at Birds of Feather session panel in SC’24.
- “XIO: Towards eXplainable I/O using multi-layer monitoring solution for HPC Systems.” in storage seminar at Centre for High Performance Computing, South Africa National Meeting 2024
- Talk on “HDF5 Explainability with eBPF” at Birds of Feather session panel in SC’24.
- Panelist, “Storage Architectures and I/O Optimizations for AI Applications,” PDSW’25 at SC’25
- Keynote, “Why is my I/O Slow? Rethinking Storage Systems for Explainability,” 6th Workshop on Re-envisioning Extreme-Scale I/O for Emerging Hybrid HPC Workloads (REX-IO’26) at HPDC 2026, Cleveland, OH, July 13, 2026.
- Panelist, “Data Centers: Information, Misinformation, and the Future of Large-Scale Computing,” 35th ACM International Symposium on High-Performance Parallel and Distributed Computing (HPDC 2026), Cleveland, OH, July 15, 2026 (moderator: A. Maccabe).
- Invited talk on Rabbit software-defined storage, Livermore Computing seminar, LLNL, 2026.
- Mini-symposium talk on Rabbit software-defined storage, SIAM Conference on Computational Science and Engineering (CSE27).
- Contributor, DOE ASCR Principal Investigator Meeting, 2026.

- Judge, ACM Student Research Competition, International Conference on Parallel Architectures and Compilation Techniques (PACT).
- Program Committee Member for IPDPS 2026, HPDC 2026, IEEE Cluster 2026, CCGrid 2026, ICS 2026, ICPP 2026, ESSA 2026, and REX-IO 2026.
- Posters Co-Chair, 35th ACM International Symposium on High-Performance Parallel and Distributed Computing (HPDC 2026), with S. Neuwirth.
- Posters Co-Chair, IEEE International Conference on Cluster Computing (Cluster 2026), with A. K. Paul.
- Program Co-Chair, 38th International Conference on Scalable Scientific Data Management (SSDBM 2026), San Diego, CA, with D. Moise.

RESEARCH EXPERIENCE

Lawrence Livermore National Laboratory — Livermore, CA, USA

Computer Scientist — Sep 2023 – Current

- **Provenance (Moirai) – Principal Investigator, LDRD**
  - Leading a new effort to track the lineage and lifecycle of scientific data across workflow tasks and storage systems.
- **Deep Learning I/O (DLDL, DLIO, GLANCED-IO, CoDL) – Co-PI, DLDL**
  - Designed workload-driven benchmark models capturing dataset structure, access patterns, preprocessing, and checkpointing behavior.
  - Enabled systematic evaluation of storage systems and I/O pipelines for AI workloads across HPC platforms.
  - Adopted in multiple HPC centers and integrated into the MLCommons Storage Benchmark suite.
  - Delivered a deployable DFTracer module on Livermore Computing and generated the I/O characterization dataset for the Genesis project.
- **Scheduling and Data Management (Heuretes; FRACTALE, past) – Data Management Thrust Lead**
  - Delivered IFlux, DataCrumbs, and Metis, completing the I/O-intent component of the FRACTALE multi-cluster scheduling stack.
  - Investigating multi-cluster and cross-site scheduling and data management.
- **Explainable I/O (XIO, DataCrumbs, Metis)**
  - Built eBPF-based instrumentation to monitor I/O behavior across heterogeneous storage and compute layers.
  - Enriched low-level telemetry with contextual workflow information to enable explainable performance analysis.
  - Developed agentic knowledge synthesis (Metis) to explain I/O performance in HPC systems.
- **Performance Monitoring and Analysis (DFTracer, DFAnalyzer, WisIO, HORATIO)**
  - Lead multi-layer data-flow tracing and scalable trace analysis for AI and scientific workflows.
  - Automated I/O bottleneck detection and trace management at scale.
- **Rabbit Accelerator Performance Characterization and Optimization**
  - Published the first systematic evaluation of Rabbit software-defined storage, establishing the lab-wide performance baseline on El Capitan-class systems (up to 25$\times$ speedup on I/O benchmarks); results transferred to DLDL, FRACTALE, and CODA.
  - Optimized I/O of the exascale implicit kinetic plasma code iPIC3D on El Capitan using Rabbits (LLNL Director's Institutional Award).
  - Characterized performance behavior across diverse workloads including simulations and AI training pipelines.
  - Provided insights to guide system configuration and integration of accelerator-backed storage in HPC environments.
- **Asynchronous Data Services (CODA, WADO)**
  - Built WADO, a distributed WORM storage service for asynchronous data operations, and explored DPU offloading.
- **Scalable Checkpoint and Restart (SCR)**
  - Investigating the performance of checkpoint and restart in large language models.
  - Investigating the configurability of SCR with complex multi-stage workflows.

Lawrence Livermore National Laboratory — Livermore, CA, USA

Post Doctoral Researcher — June 2021 – Sep 2023

- **I/O Performance and Portability (IOPP)**
  - Experience with characterizing the I/O requirement of AI application in HPC systems.
  - Experience with building a comprehensive taxonomy of AI applications.
  - Experience with designing I/O systems which utilizes user's preferences and transparently optimizes I/O in a multi-tenant HPC system.
  - Invented I/O intents for storage system and demonstrated its benefits in designing workload-aware storage systems.
- **Scalable Checkpoint and Restart (SCR)**
  - Experience with the internal architecture of SCR.
  - Study of the impact of Async I/O on applications using SCR
- **DYnamic and Asynchronous Data Streamliner (DYAD)**
  - Experience with sharing data across producer-consumer workflows.
  - Demonstrating the need for efficient caching through DYAD in deep learning workloads.
- **GOTCHA**
  - Maintainer of the GOTCHA toolkit.
  - Experience with application compilation, execution, and assembly-level instructions.
  - Contributed to the GOTCHA toolkit to support newer Glibc kernes.

Illinois Institute of Technology — Chicago, IL, USA

Research Assistant — Aug 2016 – May 2021

- **AI in HPC:** Accelerating data management for Scientific AI workloads.
  - Experience with characterizing I/O behavior of Scientific AI application in ALCF.
  - Experience with data management in existing AI frameworks such as TensorFlow and PyTorch.
  - Experience with profiling I/O and data operations in AI frameworks.
  - Currently working on accelerating data ingestion in AI workloads using deep memory and storage hierarchy.
- **I/O Integration:** Convergence of the semantic gap between the **Cloud and HPC** ecosystems.
  - Experience with various data representations of storage solutions for applications.
  - Designed novel transformations between object and file data representations.
  - Deployed various software solutions such as OrangeFS, Lustre, Hyperdex, MongoDB, and redis.
- **Multi-tiered storage**: Design **I/O optimizations** for new **multi-tiered** environments.
  - Experience with various storage devices along with kernel models to deploy NVMe-over-fabric.
  - Deployed I/O hierarchical buffering VOL software for HDF5 library on Cori supercomputer.
  - Designed a data-centric hierarchical prefetching solution for HPC environments.
- LABIOS: A Label-based I/O System
  - Experience with building decoupled architecture and deploying it at scale.
  - Designed and developed the label based system and deployed it on Chameleon Cloud.
- **Data Compression**: Study the variability of **compression performance** for different data characteristics and requirements.
  - Experience with many lossless data compression libraries and their usage.
  - Unified all compression libraries under a single framework with a novel decision engine.
  - Deployed the compression framework on multiple nodes on Theta supercomputer.
- **Profiling**: Design an **application-profiler** to estimate the application's I/O based on its **source code**.
  - Experience with open compilers such as GCC and LLVM.
  - Designed python based tool to extract I/O features from application source code.
  - Developed a linear regression model to predict I/O intensity based on source code features.
- Designed and developed **a distributed data structure library** (HCL).
  - Experience with RDMA technologies such as IBVerbs, RoCE, NVMe over fabric.
  - Experience with parallel programming languages (e.g., Chappel and UPC++).

Argonne National Laboratory — Lemont, IL, USA

Research Aid — May 2020 – Aug 2020

- Understanding data access and processing API in TensorFlow and PyTorch
- Explored various profiling tools for high-level framework profiling (e.g., TensorBoard) and low-level I/O profiling (e.g., Darshan)
- Characterized I/O behavior for AI applications in ALCF.
- Built an analysis tool VaniDL which combines Darshan Traces with TensorBoard and provides a high-level analysis of I/O behavior.

The HDF Group — Champaign, IL, USA

Research Intern — May 2018 – Aug 2018

- Designed framework for Hierarchical Buffering Platform as a VOL Plugin in HDF5.
- Tested the new software on **Cori Supercomputer**.

PROJECTS

Current Projects:

- **Moirai** – Principal Investigator, "Trusted Data Provenance for HPC Workflows" (LDRD ER 27-ERD-025). Provenance tool that tracks the lineage and lifecycle of data across scientific workflows.
- **DLDL** (Deep Learning Data Loading) – Co-Principal Investigator. Benchmarking, monitoring, and optimizing deep learning I/O pipelines on HPC systems through DLIO and DFTracer.
- **Heuretes** – Thrust Lead for all data management (LDRD Strategic Initiative). Cross-site data movement and scheduling under time constraints.
- **XIO** – I/O explainability and the anatomy of HPC storage stacks (DataCrumbs, Metis).
- **GOTCHA** – Lead developer and maintainer (since June 2023) of a mission-critical LLNL tool for function interposition, supporting applications, software, and tools across the DOE and NNSA ecosystem.

Past Projects:

- **FRACTALE** – Thrust Lead for Data Management (LDRD Strategic Initiative, from Oct 2023). Multi-cluster scheduling and data management; built IFlux (intent-aware storage tiers and scheduling in Flux) and DataCrumbs.
- **CODA** (Compute on Demand Asynchronous) – Built WADO, a distributed WORM storage service for asynchronous data operations, and explored offloading data services to DPUs.
- **IOPP** (I/O Performance and Portability) – Lead researcher (June 2021 – Sep 2023) for Dr. Kathryn Mohror's DOE ASCR Early Career Award; introduced I/O intents for workload-aware storage systems.

CODE DEVELOPMENT WITH IMPACT

DLIO Benchmark

44 GitHub Stars

https://github.com/argonne-lcf/dlio_benchmark

Jan 2021 – Current

- Used as a benchmark for **acceptance testing and debugging for Aurora** for AI workloads in ALCF.
- It is used a benchmark by many researchers in Germany (Radita Liam and Sarah Neuwirth)
  - Jean Luca Bez and Suren Byna Lawrence Berkeley National Laboratory, USA
  - Takaaki Fukai National Institute of Advanced Industrial Science and Technology (AIST), Tokyo
- It is part of **MLPerf benchmark suite for benchmarking Storage** (https://mlcommons.org/working-groups/benchmarks/storage/)

DFTracer: Data Flow Tracing Infrastructure for AI Workflows

https://github.com/llnl/dftracer

- Provides multi-layer tracing of deep learning I/O pipelines, capturing data movement across frameworks, libraries, and system calls.
- Used by researchers to analyze data movement in AI training pipelines and scientific workflows on large-scale HPC systems.
- Used by MLCommons MLPerf Storage working group for analyzing and understanding I/O performance of benchmark submissions.
- Adopted at Argonne Leadership Computing Facility (ALCF) and Oak Ridge Leadership Computing Facility (OLCF) for deep learning I/O performance analysis and workflow characterization.

Software Releases:

- DFTracer v1.0.0 – v1.0.4 (2024) and v2.0.2 (2026), including a deployable Livermore Computing module for turnkey multi-node I/O and compute tracing of production workflows.
- GOTCHA v1.0.6, v1.0.7 (2024), and v1.0.8 (2025).
- DLIO Benchmark v2.0.0 (2024).

PROFESSIONAL EXPERIENCE

Oracle Financial Services Software

Mumbai, India

Application Developer 2

Sept 2013 – July 2016

- Designed framework for **REST API** for product's middleware impacting cloud integrations.
- Developed utility for **inter-release** activities for clients enabling migration to a newer version in a day.
- Mentoring new employees on **product framework and design**, helping them deliver faster.
- Awarded "**We Applaud Award**" for designing a framework affecting the whole organization.

FUNDING AND MENTORING

Funding:

- **Co-Investigator**, LDRD Exploratory Research 25-ERD-042 with N. Dryden (three years, FY25–FY27).
- **LLNL Technical Point of Contact** for two university subcontracts: University of Tennessee, Knoxville (PI M. Taufer; student D. Dhakshinamoorthy) and Illinois Institute of Technology (PI X.-H. Sun; student N. Rajesh); one more pending for Fall 2026.
- Led the data management thrust (Thrust 2) of a DOE ASCR proposal with J. Hittinger (2025).

Mentoring:

- 2026: Mentored four summer interns, who presented five posters.
- 2025: Supervised two staff (K. Youssef and A. Marathe) and mentored six students (O. Kogiou, Harish, N. Rajesh, D. Dhakshinamoorthy, I. Yildirim, and R. A. O. Sinurat).
- 2024: Mentored five students, who submitted three SC posters.

HONORS AND AWARDS

- LLNL Director's Institutional Award for "Optimizing I/O for an Exascale Implicit Kinetic Plasma Simulation using the Rabbit Storage System" (iPIC3D on El Capitan, REX-IO 2025).
- R&D 100 Award for UnifyFS, 2024.
- Outstanding service Award at Cluster 2021 for organizing the virtual platform and managing registrations for the conference.
- Best Student Paper Award from the Computer Science Department at Illinois Tech 2021.
- Best Paper Award at the 21st IEEE/ACM International Symposium on Cluster, Cloud and Internet Computing CCGrid (May'21)
- Best Poster Nominee at the Proceedings of the International Conference for High Performance Computing, Networking, Storage and Analysis 2019.
- Karsten Schwan Best Paper Award at the 28th International ACM Symposium on High-Performance Parallel and Distributed Computing – HPDC (June'19)
- Awarded "We Applaud Award" for designing a framework affecting the whole organization at Oracle Financial Services Software.
